Attention: Mr. Don E. Jordan

Dear Mr. Jordan

Three years ago we purchased a Hoffman-Allen Model 160 Portable Oil Conditioner from your company for use in cleaning up transformer and circuit breaker insulating oils.

Up to this time we have processed just over 100,000 gallons of oil on various sizes of transformers and circuit breakers. The average cost on the operation of this equipment, including all labor, transportation and supplies, has been figured to be 16.499 cents per gallon.

Practically all of the transformer oils were cleaned up without taking the transformer out of service.

Previous to cleaning transformer oil, our experience was that we were losing between three and five transformers a year which we suspected were, to some extent, due to the condition of the oil. To date, we have lost no transformer in which we have processed the oil with this equipment.

We make tests on the oil before processing and after processing and leave the oil with a oxide inhibitor as the last operation in cleaning up the transformer.

We have found our purchase of this equipment to be a very good investment and look forward to many more years of service from this equipment.

Yours very truly,

Vice President - Transm. & Distr.
